

RINZAN N P

AI Engineer | LLM Systems | RAG & Agentic Workflows

Kannur, India • +91 8921223031 • nprinzan@gmail.com • [linkedin.com/in/rinzannp](https://www.linkedin.com/in/rinzannp) • github.com/Rinzan-NP

PROFESSIONAL SUMMARY

AI Engineer with 2+ years of experience building production-grade LLM systems, RAG pipelines, and agentic architectures using OpenAI and LangChain. Proficient in FastAPI and Django for high-performance AI microservices, and Docker and AWS (EC2, S3) for containerized cloud deployments. Experienced in full-stack development with React.js and Next.js, backed by PostgreSQL, MySQL, and MongoDB. Passionate about designing end-to-end AI products — from document ingestion and vector retrieval to API exposure and frontend delivery.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL

AI / LLM: OpenAI API, LangChain, RAG, Agentic Workflows, Tool-Calling, Prompt Engineering, Vector Search, Embeddings, Multi-step Reasoning

Backend: FastAPI, Django, Django REST Framework, REST APIs, Async Programming, Microservices

Frontend: Next.js (SSR, API Routes), React.js, HTML, CSS

Databases: PostgreSQL, MySQL, MongoDB, Vector Databases

DevOps & Cloud: Docker, AWS (EC2, S3), Linux, VPS Deployment, Git, CI/CD

PROFESSIONAL EXPERIENCE

AI Engineer — Solinify Tech Studio *Dec 2025 – Present*

- Architect LLM-powered backend services using FastAPI, delivering scalable, production-grade AI APIs for downstream applications
- Design and deploy RAG pipelines covering document ingestion, chunking, embedding generation, and vector-based semantic retrieval
- Build multi-step agentic workflows with tool-calling, structured execution, and contextual reasoning via LangChain
- Containerize AI microservices with Docker and deploy on AWS EC2 with environment-specific configurations for staging and production
- Model and manage data across PostgreSQL and MongoDB; monitor API latency and system reliability to maintain production stability

Full Stack AI Developer — Prospello Technologies *Aug 2025 – Nov 2025*

- Built AI-enabled full-stack applications integrating LLM features and ML model inference using Django, FastAPI, React.js, and Next.js
- Designed RESTful APIs as the integration layer between Next.js frontends and AI inference backends; managed prompt design and response handling
- Optimized PostgreSQL and MySQL schemas for high-throughput AI data pipelines; contributed to architecture decisions for scalability and clean AI/business logic separation

Django Developer — Gingr Informatics *Jun 2024 – Aug 2025*

- Developed secure, scalable backend systems using Django and Django REST Framework for multiple production client applications
- Designed normalized database schemas and wrote optimized SQL queries to reduce latency on complex data operations
- Implemented JWT authentication and RBAC; built versioned REST APIs with error handling and documentation for frontend and mobile consumers
- Managed deployments on Linux-based VPS environments, handling server configuration and application health monitoring

KEY PROJECTS

Agentic AI Research & Automation System

- Designed a multi-step LLM agent with dynamic tool-calling, persistent memory (MongoDB), and structured task execution using LangChain; exposed full orchestration via FastAPI REST endpoints
- Implemented real-time retrieval workflows enabling the agent to query and synthesize external knowledge sources; containerized and deployed on AWS EC2 with Docker

LLM-Based RAG Knowledge Platform

- Built end-to-end document pipeline — ingestion, chunking, embedding, and vector store indexing — using OpenAI and LangChain, enabling grounded answers over large private document corpora
- Designed FastAPI + PostgreSQL backend and Next.js SSR frontend; deployed full containerized stack on AWS with Docker and S3 for document storage

EDUCATION

B.Tech — APJ Abdul Kalam Technological University, India *2024 – 2028*

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Software Engineering, Computer Networks, Operating Systems
